## PROJECTS

---

- **ios Calculator** : In this project, the goal is to make a functional and visual clone of the calculator of an iOS device. *Skills/Tools : HTML, CSS Frameworks, JS Dom Manipulation and Event Listeners.*
- **To - Do App** : In this project, a simple To-Do application was made using the array structure. User can add task from browser, mark tasks as completed and delete them. Completed/total number of tasks can be displayed with a counter. *Skills/Tools : JS Dom Manipulation and Event Listeners.*
- **Checkout Page** : My goal was to develop a real e-commerce website's checkout page for that project. There is a cart for buying products, and we can increase or decrease the number of products. By changing a parameter in the cart, our js functions calculate the cart total price. DOM, iterator, callback functions, string-array functions and events are used in our page. Additionally, we can remove products from the cart by clicking the remove button and decreasing the amount to "0". In that case, our page asks us to delete the product from the cart. As soon as you confirm the deletion, the sour chart total is recalculated by the js functions. *Skills/Tools : DOM, Iterator, Callback functions, String-array functions and Events.*
- **World Flags App** : The goal of this project is to make an api request from <https://restcountries.com/> and to display the desired data about the countries. *Skills/Tools : Async, Await and Fetch.*
- **Movie Ticket App** : In this project, it is aimed to create an application for a website that sells online event tickets. Users can view the events, view the available seats for the event they have selected, claim what they want among them and see the amount they will pay. *Skills/Tools : Json, Local Storage and Array Methods.*
- **Weather Condition App** : The purpose of this project is to make a weather application using the <https://api.openweathermap.org> api. It is to bring and display the weather conditions of the location desired by the user. *Skills/Tools : Async await methods.*
- **Movie App** : In this project, it is aimed to display cinema posters by using the tmdb api. There is a search feature according to the entered word. *Skills/Tools : React-router library, Bootstrap library, Axios library and Firebase*
- **Firecontact App** : In this project, it is aimed to create a contact list using firebase realtime-database. Adding, deleting and updating contacts can be done. *Skills/Tools : Firebase realtime-database library, Semantic-ui library and React-toastify library.*
